

Exp No:4 To Count the frequency of occurrence of a word in a body of text is often needed during text processing.

Description: Import the word_tokenize function and gutenber.

```
import nltk

from nltk.tokenize import word_tokenize

from nltk.corpus import gutenber

# Download the gutenber corpus if not already installed

nltk.download('gutenber')

nltk.download('punkt') # Ensure the punkt tokenizer models are also downloaded

# Load the text from the gutenber corpus

sample = gutenber.raw("austen-emma.txt") # Change to an existing text from the corpus

# Tokenize the sample text

token = word_tokenize(sample)

# Create a list of the first 50 tokens

wlist = []

for i in range(50):

    wlist.append(token[i])

# Calculate the frequency of each word in the list

wordfreq = [wlist.count(w) for w in wlist]

# Print the word-frequency pairs

print("Pairs\n" + str(list(zip(wlist, wordfreq))))
```

OUTPUT:

```
